Manager's Investment Report

Investment Objective and Policy

This objective of the Fund is to deliver long-term growth of capital, and income.

The Fund invests in a broad range of UK and overseas companies' shares, fixed interest securities, cash and other assets including those giving indirect exposure to commodities and property. The Fund will have a bias towards fixed interest securities and up to 20% of the Fund's property will have an exposure to shares.

Exposure to these asset classes will be achieved usually through investments in collective investment schemes but may also be achieved by investing directly in shares, fixed interest securities, cash, near cash, deposits and money market instruments as well as collective investment schemes. At times the Fund may be fully invested in collective investments schemes only or direct investments only. The collective investment schemes invested include Index-tracking or actively-managed funds managed by Legal & General.

The Fund will use derivatives for Efficient Portfolio Management purposes only.

Manager's Investment Report

During the period under review, the price of the Fund's I-Class accumulation units fell by 0.46%. The Fund under-performed its benchmark as funds within the Investment Association Mixed Investment 0-35% Sector delivered a return of 1.63% (Source: Lipper Hindsight).

Past performance is not a guide to future performance.

The value of investments and any income from them may go down as well as up.

Market/Economic Review

Concerns that the Federal Reserve was raising US interest rates too quickly, the risk of a prolonged government shutdown in the US, the ongoing US-China trade dispute and weaker global economic indicators all combined to trigger widespread risk aversion amongst investors during the period under review. Markets became increasingly volatile as 2018 ended, recording heavy losses before regaining some lost ground in January.

Global equity indices have performed poorly over the last six months. The healthcare sector outperformed, boosted by robust earnings growth. As global economic prospects became more uncertain, technology stocks struggled while the energy sector underperformed as the oil price fell back to a 15-month low in December.

US equities recorded a loss over the period. The market fell sharply in December as concerns about the impact of higher interest rates and the political impasse between the Trump administration and Congress combined to unsettle investors. Real estate, utilities and healthcare were the best performing sectors, while the energy, financials and communication services sectors were weakest.

UK equities underperformed global indices, as uncertainty surrounding the outcome of Brexit negotiations preoccupied investors. Sterling weakened to a 20-month low against the US dollar in December. Energy and industrials were amongst the weakest sectors, while it was also a disappointing period for retailers.

Returns from European equities have also been disappointing over the period. Political concerns have resurfaced, most notably in Italy. This reawakened the debate on the future of the Eurozone. Renewed fears of contagion risk drove down financial stocks, notably banks.

Manager's Investment Report continued

Although concerns over US-China trade tensions and higher US interest rates weighed on global equities, emerging market equities demonstrated some element of resilience. In regional terms, Latin American equities outperformed.

The major international bond markets outperformed equities, recording a modest gain for sterling-based investors. Gilts ended the period with a modest gain. Sterling-denominated corporate bonds underperformed gilts, impacted by concerns about the UK economic outlook and corporate profits, with the deadline for the conclusion of Brexit negotiations fast approaching.

Fund Review

The Fund produced a negative return over the review period.

The Fund's negative performance was largely driven by December's market falls. In particular, the Fund's allocation to UK and European equities damaged performance during this period. However, the Fund delivered a positive return in January, as markets rallied after the December lows. A significant part of the positive performance can be attributed to developed market equities improving their performance the most after last quarter. Investment grade credit was also a large positive contributor.

Recently, the most significant change to the portfolio positioning was increasing UK equities across most of the funds, taking advantage of more attractive valuations after experiencing large falls in December. This was beneficial for Fund performance in January.

Meanwhile, we closed the European utilities position in the Funds, after strong performance on an absolute and relative basis against European equities. Similarly, we closed the Australian sovereign bond position, partially replacing it with US treasuries.

Outlook

Our view is that US fundamentals remain solid, but also, we see this period as the start of the twilight zone between expansion and a downturn marking the end of the cycle. Our research suggests that equity bull market rallies tend to end suddenly, so de-risking a few months too early can be as problematic as a few months too late. However, those hoping for a return to tranquillity may be disappointed, and we believe this is an environment where a point forecast for equities at the end of the period is increasingly difficult to pin down. As such, at this stage we'll tend to lean against strong investor sentiment in either direction.

The recent dovish shift from the US Federal Reserve seems to have given equity markets the leg-up they needed, and in the broader setting it may mean we are further from the end of the economic cycle than we previously thought. In this context, we continue to hold our neutral position in risk assets, currently preferring European and Japanese to broad US stocks, while also favouring the technology and US energy sectors. We expect continued pressure on credit markets. However, consistent with our constructive outlook for emerging market fundamentals, emerging market debt (both hard and local currency) looks increasingly interesting.

One important concern is the potential for a persistent change in the relationship between equities and bonds. Bonds' shock-absorbing capacity could disappear when an inflationary mindset takes hold. We also think we may continue to see pressure on

the euro as Brexit negotiations go to the wire, and lacklustre growth appears to weaken further as Italy has tipped into recession.

Risk and Reward Profile

- The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is not guaranteed to remain the same and may change over time. It is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table above shows the Fund's ranking on the Risk and Reward Indicator.
- The Fund is in category three because the mix of different asset types in which the Fund invests has a balancing effect on the rate at which the Fund share price moves up and down. This type of fund is generally considered to be higher risk than one investing only in bonds and lower risk than one investing only in company shares.
- Even a fund in the lowest category is not a risk free investment.
